

MITUL R. VAGHASIYA

SENIOR MOBILE ENGINEER & DEVELOPMENT LEAD

+91 6353824140 • mr.vaghasiya197@gmail.com • github.com/MR0100 • [linkedin/mitul-vaghasiya-075a53166](https://linkedin.com/in/mitul-vaghasiya-075a53166)

PROFESSIONAL SUMMARY

Results-driven Lead Mobile Engineer with over 6 years of experience architecting and delivering high-performance native and cross-platform mobile applications. Proven track record of leading cross-functional teams and driving mobile strategy across the full software development lifecycle at KGK Infotech LLP. Possess deep technical expertise in translating complex business requirements into scalable architectures using **Flutter, Kotlin, Java and Swift**. Adept at optimising intricate application performance—including memory management and rendering—while establishing robust RESTful API and backend integrations. A dedicated mentor who champions **Agile methodologies**, enforces best practices in **UI/UX design**, and **streamlines CI/CD workflows (Firebase, Git, Jira)** to ensure technical excellence and on-time project delivery.

EDUCATION & CERTIFICATES

Bachelor of Computer Applications (B.C.A)

S.V.PATEL College of Computer Application & Management

2017 - 2020 | Katargam, Surat, Gujarat, India

Certified Frontend Engineer in Flutter, ranked in top 5% of professionals by Pro5. ([Link](#))

PROFESSIONAL EXPERIENCE

Mobile Development Team Lead

KGK InfoTech LLP

April 2025 - Present | Surat, Gujarat, India

- Senior Mobile Development Lead with 6+ years architecting scalable cross-platform (Flutter) and native (Kotlin, Swift) applications. Expert in translating complex business needs into high-performance solutions using Clean Architecture and SOLID principles.
- Proven track record directing cross-functional engineering teams via Agile/Scrum to accelerate flagship application delivery. Adept at mentoring developers, driving rigorous code reviews, and streamlining CI/CD workflows (Git, Jira) to reduce development cycles.
- Highly skilled in optimizing app performance, resolving memory bottlenecks, and driving seamless RESTful API and backend integrations. Consistently achieve 95%+ crash-free rates and 99.9% uptime via automated testing and advanced error monitoring.

Senior Mobile Application Developer (Promoted as Expert Flutter Dev ← Flutter Dev ← Jr. Flutter Dev)

Sadguru Soft

November 2019 - March 2025 | Surat, Gujarat, India

- Rapidly promoted to Senior Developer, leading technical strategy, Agile sprint planning, and international client consulting to translate complex business needs into actionable development roadmaps.
- Engineered robust Flutter-to-native bridges (Kotlin/Swift) via Method Channels, optimising memory and widget lifecycles to 60fps UI performance and significantly faster app launch times.
- Standardised cross-project architecture by enforcing Clean Architecture, SOLID principles, and rigorous code reviews, drastically reducing production bugs and improving overall codebase maintainability.
- Directed end-to-end DevOps lifecycles and CI/CD pipelines, managing everything from UI/UX implementation and GCP integrations to cross-platform web deployment (React.js/Next.js).

EXPERT-LEVEL SKILLS

- Mobile & Native Tech: Flutter, Dart, Kotlin, Java, Swift, SwiftUI, UIKit, Android, iOS, KMP, Compose.
- Architecture & Patterns: Clean Architecture, MVVM, BLoC, SOLID Principles, SDLC, Performance Optimisation.
- Backend & Web: Node.js, Express.js, Nest.js, React.js, Next.js, Ktor, PostgreSQL, Firebase.
- Leadership & Management: Team Management, Agile, Scrum, Sprint Grooming, Code Reviews, Mentorship.
- Tools & DevOps: Jira, Slack, Git, GitHub, GitLab, BitBucket, CI/CD, AWS, Generative AI, GPT, Claude, Cursor.
- Testing & QA: Automated Testing, Playwright, Crash Reporting, Quality Assurance.

KEY PROJECTS

Enterprise & E-Commerce Platforms

- **KGK - Buy Diamonds:** Led the cross-platform architecture of a global B2B e-commerce platform utilising Clean Architecture and BLoC. Optimised high-volume data grids and reduced API latency to support real-time international diamond trading.
- **KGK HRMS:** Engineered a secure enterprise-grade HR management system, implementing strict role-based access control (RBAC), encrypted local storage, and complex RESTful API integrations for seamless organisational workflows.
- **BookMrk (Student App):** Architected a scalable e-commerce application utilising Flutter, integrating responsive UI components with backend APIs for real-time catalog syncing, state management, and secure checkout flows.
- **BookMrk-Delivery:** Built a high-performance logistics application leveraging the Google Maps SDK and native background geolocation services to optimise last-mile routing and broadcast live order status updates.

Hardware, Location & Real-Time Systems

- **Locket (Location Sharing):** Spearheaded a real-time tracking engine utilising native iOS/Android background services and Method Channels to broadcast granular telemetry (location, battery, speed) alongside WebSocket-driven group chats.
- **Setera TPMS (Sensor Utility):** Engineered a hardware-interfacing utility using native Android USB Host APIs and Method Channels to establish reliable serial communication for reading and writing low-level sensor telemetry.
- **Warden Tracker:** Architected a high-precision geo-fencing system leveraging background location tracking, spatial queries, and native push notifications to trigger low-latency proximity alerts.
- **Synergy (Productivity Dating):** Developed a real-time communication platform integrating WebSockets for instant messaging, utilising advanced state handling to ensure seamless connectivity.

Data-Heavy & Media-Centric Applications

- **Lili (Health Data AI):** Integrated third-party wearable APIs (Fitbit) for complex health data ingestion. Engineered fluid, gesture-driven UI components (swappable cards) while optimising memory usage to prevent crashes during heavy data processing.
- **Marline Media (Snap Filter):** Architected a complex graphic design utility supporting high-resolution canvas rendering and layer manipulation, utilising native platform APIs to generate precise, print-ready file exports.
- **Lux-ECards:** Developed a highly customisable canvas editor using layered UI rendering, allowing users to manipulate text, images, and vectors with zero-latency export capabilities.
- **Havitglam (Lifestyle Tracker):** Built a media-centric application featuring optimised local image caching and cloud storage integration, ensuring smooth 60fps UI performance during heavy photo rendering and gallery scrolling.
- **Physio Mobile (Telehealth):** Engineered a video-centric rehabilitation app, integrating optimised video players and ensuring secure data handling for sensitive user health profiles.

Utility & AI-Driven Applications

- **Studymap (Educational):** Integrated REST APIs to fetch dynamic, AI-generated study content, utilising reactive programming principles to manage complex application states across synchronised group study sessions.
- **ForeSite (AgTech):** Contributed to a data-heavy smart agriculture ecosystem, optimising API payloads and implementing robust offline-first data synchronisation (SQLite) to ensure functionality in low-connectivity environments.
- **Tarot Cat (Astrology):** Developed a dynamic, interactive UI with custom cross-platform animations for complex card-drawing mechanics, backed by a robust offline database architecture.
- **Today's Quote:** Implemented an automated daily content delivery system utilising Firebase Cloud Messaging (FCM) and local push notifications, focusing on smooth UI transitions and micro-animations to maximise user engagement.
